

Advantages of HANSCRAFT thermocovers

HANSCRAFT[®]
european spa producer

- **Quality Czech/European production**

Our factory is equipped with modern machines with automatic programming. The final processing is done by seamstresses from the former renowned factories in Prostějov. The experience with this manual production is irreplaceable and guarantees the highest quality of the thermocovers.

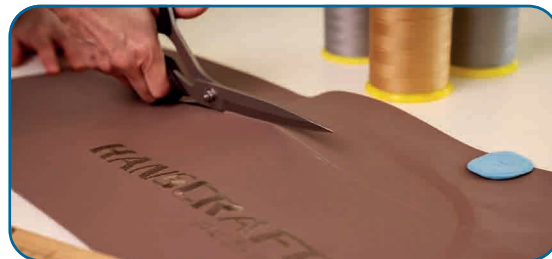

- **Long-term endurance**

Based on 15 years of experience in the sale of spas, we know the critical points of the thermocovers. We produce our Czech/European thermocovers to have 2-3 times longer endurance than their Chinese copies.

- **EU Certified Materials**

Covering material comes from Spain and it is sun resistant, chemically resistant and certified for commercial operations and for use on expensive yachts. Certification of materials **UNI EN 222.86**, **UNE EN 1021-1: 2006** and many others, for example **MSC 61—CIGARETTE TEST** against burn.

- **Unique features of coating material**

The upper material is certified for UV protection. Furthermore, it is also water-repellent, salt-water resistant and sun-stable. Our coverings are highly UV resistant. On request, we will be pleased to provide you with all our certification for comparison with our competitors. We even have tests for antibacterial or flame retardant properties that are important for demanding operations, especially in commercial use.

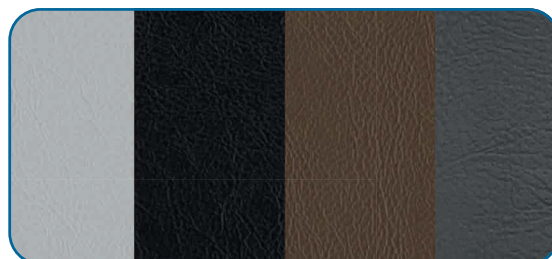

- **UV resistant threads of the German brand AMANN**

Even a small thing like a thread can make our thermocovers last almost two times longer than our competitors with cheaper threads.

- **Many color options, possibility of adaptation to the interior**

Choose from 4 high-quality colors and match the color of your thermocover with your spa cabinet.

- **Quality YKK zipper**

YKK is one of the world's top zipper manufacturers. It costs more, but they do not break in the sun or stumble over time. This is another of our secrets for the longer life of the cover.

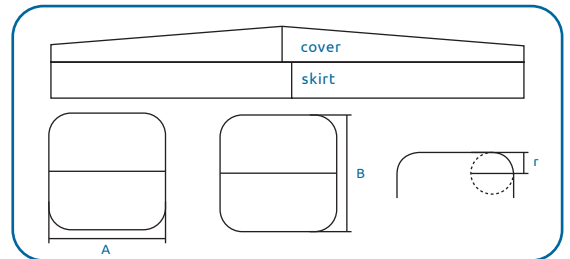

- **Short delivery terms**

Usually, the production takes around 4 weeks. You don't have to wait over two or three months for your cover from China. We respond flexibly to your needs.

- **Custom dimensions (including swimspa) and piece production**

We are willing to produce custom-made covers for atypical dimensions such as triangles or large sizes for Swim Spas.

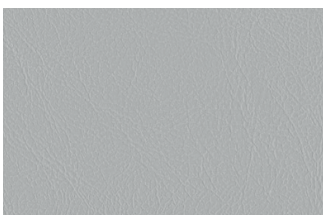

- **ECO Friendly**

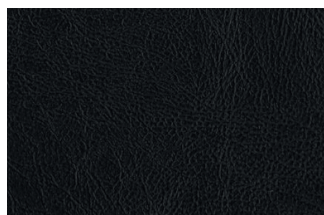

Not only do our thermo coverings not fall apart after a few first years of usage, they are also manufactured in certified plants under the name REACH COMPLIANCE AND ECO FRIENDLY. Using renewable materials under EU control means stability with a neutral carbon footprint. Great difference in comparison with manufacturers or suppliers from Asia, especially from China.
